

**Additive Inverses (Opposite):**

FIGURE 11

$2$  &  $-2$  are opposites

$$2 + -2 = 0$$

additive  
inverses

What is the additive inverse of  $-9$ ?

$\hookrightarrow 9$

What is the additive inverse of  $2.4$ ?

$\hookrightarrow -2.4$

**1.5 Adding and Subtracting Real Numbers****EXAMPLE 1** Adding Numbers on a Number Line

Use a number line to find each sum.

(a)  $2 + 3$

start = 5

(b)  $-2 + (-4) = -6$

(c)  $3 + 5 = 8$

(d)  $-1 + (-3) = -4$

Add  
absolute  
values

**Adding numbers with the same sign**

- ① Find the total amount right, or total amount left.
- ② If left, use a neg. sign in your final answer

**EXAMPLE 2** Adding Two Negative Numbers

Find each sum.

(a)  $-2 + (-9)$

$= -11$

Total left:  
11

(b)  $-8 + (-12)$

$= -20$

Total left:  
20

(c)  $-15 + (-3)$

$= -18$

Total left:  
18

**EXAMPLE 3** Adding Numbers with Different Signs

Pos &amp; Neg

Use a number line to find the sum  $-2 + 5$ .  
left right =  $\boxed{3}$ Use the number line to find the sum:  $4 + (-8)$  =  $\boxed{-4}$ **Adding numbers with different signs**

- ① Cancel the overlap by subtracting absolute values
- ② Use the sign of the bigger absolute value in your answer

**EXAMPLE 4** Adding Numbers with Different SignsFind the sum  $-12 + 5$ .

$$= \boxed{-7}$$

$$|-12| = 12 \quad |5| = 5 \Rightarrow \frac{12}{5} \Rightarrow -12 \text{ has bigger distance from zero (absolute value)}$$

Neg. answer

**EXAMPLE 5** Adding Mentally

Check each answer by adding mentally. If necessary, use a number line.

(a)  $7 + (-4)$

$$= \boxed{3}$$

(b)  $-8 + 12$

$$= \boxed{4}$$

c)  $-\frac{1}{2} + \frac{1}{8}$

$$-\frac{4}{8} + \frac{1}{8} = \boxed{-\frac{3}{8}}$$

d)  $-16 + 16$

$$= \boxed{0}$$

additive inverses

opposites

e)  $\frac{3}{4} + -\frac{7}{4} + \frac{5}{4}$

$$\frac{-4}{4} + \frac{5}{4} = \boxed{\frac{1}{4}}$$

**EXAMPLE 6** Using the Definition of Subtraction

Subtraction is the same as "adding the opposite"

$$(a) \quad 12 - 3 \\ = 12 + (-3) = \boxed{9}$$

$$(b) \quad 5 - 7 \\ = 5 + (-7) = \boxed{-2}$$

$$(c) \quad -6 - 9 \\ = -6 + (-9) = \boxed{-15}$$

$$(d) \quad -3 - (-5) \\ = -3 + 5 = \boxed{2}$$

$$(e) \quad \frac{4}{3} - \left(-\frac{1}{2}\right) \\ = \frac{4}{3} + \frac{1}{2} = \frac{4 \cdot 2}{3 \cdot 2} + \frac{1 \cdot 3}{2 \cdot 3} = \frac{8}{6} + \frac{3}{6} = \boxed{\frac{11}{6}}$$

**Uses of the Symbol -**

We use the symbol - for three purposes:

- 1. to represent subtraction, as in  $9 - 5 = 4$ ;
- 2. to represent negative numbers, such as  $-10$ ,  $-2$ , and  $-3$ ;
- 3. to represent the opposite (or negative) of a number, as in "the opposite (or negative) of 8 is  $-8$ ."

$-|-2|$   
↑  
The opp. of  $|-2|$

**EXAMPLE 7** Adding and Subtracting with Grouping Symbols

Perform each indicated operation.

$$(a) \quad -6 - [2 - (8 + 3)] \\ \text{neg. subtr.} \quad -6 - [2 - 11] \\ = -6 - [-9] \\ = -6 + 9 = \boxed{3}$$

P  
E  
MD  
AS

$$(b) \quad |4 - 7| + 2|6 - 3| \\ = |-3| + 2 \cdot |3| \\ = 3 + 2 \cdot 3 \\ = 3 + 6 = \boxed{9}$$

P  
E  
MD  
AS

**You try!**

$$(e) \quad 8 - [(-3 + 7) - (3 - 9)]$$

$$8 - [4 - (-6)] \\ = 8 - [4 + 6] \\ = 8 - 10 = \boxed{-2}$$

$$(f) \quad 3|6 - 9| - |4 - 12|$$

$$3 \cdot |-3| - |-8| \\ = 3 \cdot 3 - 8 \\ = 9 - 8 = \boxed{1}$$

Word or Phrase	Example	Numerical Expression and Simplification
Sum of	The sum of $-3$ and $4$	$-3 + 4$ , or $1$
Added to	$5$ added to $-8$	$-8 + 5$ , or $-3$
More than	$12$ more than $-5$	$-5 + 12$ , or $7$
Increased by	$-6$ increased by $13$	$-6 + 13$ , or $7$
Plus	$3$ plus $14$	$3 + 14$ , or $17$

Add

Word, Phrase, or Sentence	Example	Numerical Expression and Simplification
Difference between	The difference between $-3$ and $-8$	$-3 - (-8)$ simplifies to $-3 + 8$ , or $5$
Subtracted from*	$12$ subtracted from $18$	$18 - 12$ , or $6$
From ..., subtract ...	From $12$ , subtract $8$ .	$12 - 8$ simplifies to $12 + (-8)$ , or $4$
Less	$6$ less $5$	$6 - 5$ , or $1$
Less than*	$6$ less than $5$	$5 - 6$ simplifies to $5 + (-6)$ , or $-1$
Decreased by	$9$ decreased by $-4$	$9 - (-4)$ simplifies to $9 + 4$ , or $13$
Minus	$8$ minus $5$	$8 - 5$ , or $3$

Subtract

**EXAMPLE 8** Translating Words and Phrases (Addition)

Write a numerical expression for each phrase, and simplify the expression.

- a) The sum of
- $-8$
- and
- $4$
- and
- $6$

add!

$$\begin{array}{r} -8 + 4 + 6 \\ -4 + 6 = \boxed{2} \end{array}$$

- b)
- $3$
- more than
- $-5$
- , increased by
- $12$

add 3 onto -5

add!

$$\begin{array}{r} 3 + -5 + 12 \\ -2 + 12 = \boxed{10} \end{array}$$

Write a numerical expression and then simplify.

- c) The difference between
- $5$
- and
- $-8$
- , decreased by
- $4$

subtract  
in order

$$\begin{array}{r} 5 - (-8) - 4 \\ 5 + 8 - 4 \end{array}$$

$$13 - 4 = \boxed{9}$$

subtract

- d)
- $7$
- less than
- $-2$

take 7  
away  
from

$$\begin{array}{r} -2 - 7 \\ -2 + -7 \end{array}$$

$$\boxed{-9}$$

**EXAMPLE 10** Solving a Problem Involving Subtraction

The record-high temperature in the United States is  $134^{\circ}\text{F}$ , recorded at Death Valley, California, in 1913. The record low is  $-80^{\circ}\text{F}$  at Prospect Creek, Alaska, in 1971. See FIGURE 16. What is the difference between these highest and lowest temperatures? (Source: National Climatic Data Center.)

$$\begin{array}{rcl}
 134 - (-80) & & \\
 134 + 80 & = & \boxed{214^{\circ}}
 \end{array}$$

10b) Find the difference between a gain of 226 yards on the football field by the Chesterfield Bears and a loss of 7 yards by the New London Wildcats.

$$\begin{array}{rcl}
 226 & & \\
 -7 & & \\
 \hline
 226 - (-7) & & \\
 = 226 + 7 & = & \underline{233 \text{ yards}}
 \end{array}$$
