

**EXAMPLE 10** Solving a Problem Involving Subtraction

The record-high temperature in the United States is  $134^{\circ}\text{F}$ , recorded at Death Valley, California, in 1913. The record low is  $-80^{\circ}\text{F}$ , at Prospect Creek, Alaska, in 1971. See

**FIGURE 16.** What is the difference between these highest and lowest temperatures? (Source: National Climatic Data Center.)

$$\begin{array}{r} 134 - (-80) \\ 134 + 80 = \boxed{214^{\circ}} \end{array}$$

- 10b) Find the difference between a gain of 226 yards on the football field by the Chesterfield Bears and a loss of 7 yards by the New London Wildcats.

-7

$$\begin{array}{r} 226 - (-7) \\ = 226 + 7 = 233 \text{ yards} \end{array}$$

## 1.6 Multiplying and Dividing Real Numbers

Multiplying numbers with different signs

$$\text{Pos} \times \text{Neg} = \boxed{\text{Neg}}$$

Ex.  $2(-3)$  means "2 groups of  $-3$ " ~~—————~~  
~~-6 -3 0~~

Multiplying two negative numbers

$$\text{Neg} \times \text{Neg} = \boxed{\text{Pos}}$$

**EXAMPLE 1** Multiplying a Positive Number and a Negative Number

Find each product, using the multiplication rule given in the box.

$$\begin{array}{ll} (\text{a}) 8(-5) & (\text{b}) (-5)4 \\ = -40 & = -20 \end{array}$$

$$(\text{c}) -9\left(\frac{1}{3}\right) = -9 \cdot \frac{1}{3} = -\frac{9}{3} = \boxed{-3}$$

**EXAMPLE 2** Multiplying Two Negative Numbers

$$\begin{array}{lll} (\text{a}) -9(-2) & (\text{b}) -6(-12) & (\text{c}) -8(-1) \\ = 18 & = 72 & = 8 \end{array}$$

**EXAMPLE 4** Dividing Signed Numbers

Find each quotient.

(a)  $\frac{8}{-2} = -4$

(b)  $\frac{-100}{5} = -20$

$$\begin{array}{c} \text{Same sign:} \\ \text{Neg Neg} = \boxed{\text{Pos}} \end{array}$$

$$\begin{array}{r} \cancel{2}1 \\ 7 \overline{)1.47} \\ -14 \downarrow \\ \hline 07 \end{array}$$

(c)  $\frac{-1.47}{-7} = 0.21$

c)  $-\frac{1}{8} \div \left(-\frac{3}{4}\right) \boxed{1}$

d)  $\frac{0}{14.2} = \boxed{0}$

e)  $\frac{14.2}{0} = \text{Undefined}$

$$-\frac{1}{8} \cdot -\frac{4}{3} = \frac{4}{24} = \boxed{\frac{1}{6}}$$

**EXAMPLE 5** Using the Rules for Order of Operations

Perform each indicated operation.

$$\begin{aligned} \text{a) } & \underbrace{-9(2)}_{= -18} - \underbrace{(-3)(2)}_{= +6} \\ & = -18 + 6 \\ & = \boxed{-12} \end{aligned}$$

$$\begin{aligned} \text{b) } & \underbrace{-5(-2)}_{= 5(-5)} - \underbrace{3}_{= 25} \\ & = \boxed{25} \end{aligned}$$

$$\begin{array}{c} P \\ E \\ \text{MD} \\ AS \end{array}$$

$$\begin{aligned} \text{c) } & \underbrace{-6 + 2(3)}_{= -6 + 4} - \underbrace{5}_{= \boxed{-10}} \\ & = \boxed{-10} \end{aligned}$$

$$\begin{array}{c} 3+5 \\ P \\ E \\ \text{MD} \\ AS \end{array}$$

d)  $\frac{5(-2)-3(4)}{2(1-6)} = \frac{-10-12}{2(-5)} = \frac{-10+12}{-10} = \frac{-22}{-10}$

$$= \frac{22 \div 2}{10 \div 2} = \boxed{\frac{11}{5}}$$

$$\begin{aligned} \text{e) } & \underbrace{-4(6)}_{= -24} - \underbrace{(-5)(12)}_{= 60} \\ & = -24 - 60 \\ & = \boxed{36} \end{aligned}$$

**EXAMPLE 6** Evaluating Expressions for Numerical ValuesEvaluate each expression for  $x = -1$ ,  $y = -2$ , and  $m = -3$ .

a)  $(3x + 4y)(-2m)$

$$\begin{aligned} & (\underbrace{3x + 4y}_{(-3 + -8)})(\underbrace{-2m}_{6}) \\ & (-11)(6) = \boxed{-66} \end{aligned}$$

b)  $2x^2 - 3y^2$

$$\begin{aligned} & 2(\underbrace{x^2}_{1}) - 3(\underbrace{y^2}_{4}) \\ & 2 \cdot 1 - 3 \cdot 4 \\ & = \boxed{-10} \end{aligned}$$

$$\begin{array}{c} (-1)^2 = -1 \cdot -1 \\ = 1 \\ (-2)^2 = -2 \cdot -2 \\ = 4 \end{array}$$

$$\begin{array}{c} P \\ F \\ \text{MD} \\ AS \end{array}$$

$$\begin{aligned} \text{c) } & \frac{4y^2 + x}{m} = \frac{4(-2)^2 + (-1)}{-3} \\ & = \frac{4 \cdot 4 + -1}{-3} \\ & = \frac{16 + -1}{-3} \\ & = \frac{15}{-3} = \boxed{-5} \end{aligned}$$
